Mock Exam

iSAQB® Certified Professional for Software Architecture – Foundation Level (CPSA-F)®

Answer Sheet 2024.1-rev0-EN-20240202

Explanatory notes on the Mock Exam Certified Professional for Software Architecture – Foundation Level (CPSA-F®)

Explanations to the mock exam Certified Professional for Software Architecture - Foundation Level (CPSA-F®) This examination is a mock exam, which is based on the certification exam of the Certified Professional for Software Architecture - Foundation Level (CPSA-F®) in form and scope. It serves to illustrate the real iSAQB® CPSA® examination as well as to prepare for the corresponding exam. The mock exam consists of 39 multiple-choice questions, which can be evaluated with 1 or 2 points depending on the level of difficulty. At least 60 percent must be achieved to pass the exam.

51.0 points can be achieved in this mock examination, you would need 30.6 points to pass.

The following general rules apply:

- Depending on the level of difficulty and the length of the question, you can achieve a score of 1 or 2 points.
- Correct answers result in plus points, incorrect answers result in a deduction of points, but only with regard to the respective question. If the wrong answer to a question leads to a negative score, this question is evaluated with a total of 0 points.

The multiple-choice questions of the mock exam are divided into three types of questions:

A-Questions (Single Choice, Single Correct Answer): Select the only correct answer to a question from the list of possible answers. There is only one correct answer. You receive the specified score for selecting the correct answer.

P-Questions (Pick-from-many, Pick Multiple): Select the number of correct answers given in the text from the list of possible answers to a question. Select just as many answers as are required in the introductory text. You receive 1/n of the total points for each correct answer. For each incorrect cross, 1/n of the points are deducted.

K-Questions (Allocation Questions, Choose Category): For a question, select the correct of the two options for each answer choice ("correct" or "incorrect" or "applicable" or "not applicable"). You will receive 1/n of the points for each correctly placed cross. Incorrectly placed crosses result in the deduction of 1/n of the points. If NO answer is selected in a line, there are neither points nor deductions.

For a more detailed explanation of the question types and scoring system, further information is available in the CPSA-F examination rules.

The allowed time is 75 minutes for native speakers and 90 minutes for non-native speakers. In order to ensure that the preparation for the exam is as authentic as possible, the processing time should be adhered to and any aids (such as seminar materials, books, internet, etc.) should not be used. The exam can subsequently be evaluated using the solution for this mock exam. Given that the iSAQB® e.V. is indicated as source and copyright holder, the present mock exam may be used in the context of training courses, for exam preparation or it may be passed on free of charge.

However, it is explicitly prohibited to use these exam questions in a real examination.

Question 1

ID: Q-20-04-01

| A-Question: | | Choose one answer. | 1 point | | | |
|-------------|---------------------------|--|--------------------|--|--|--|
| How m | any defini | tions of "software architecture" exist? | | | | |
| [] | (a) | Exactly one for all kinds of systems. | | | | |
| [] | (b) | One for every kind of software system (e.g. "embedded", "rea support", "web", "batch",). | l-time", "decision | | | |
| [X] | (c) | A dozen or more different definitions. | | | | |
| Quest | tion 2 | | | | | |
| ID: Q-2 | 0-04-02 | | | | | |
| P-Que | estion: | From the following five answers select three that fit best. | 1 point | | | |
| Which ' | THREE of | the following aspects are covered by the term "software architectu | re"? | | | |
| [X] | (a) | Components | | | | |
| [X] | (b) | Cross-cutting concepts | | | | |
| [X] | (c) | (internal and external) Interfaces | | | | |
| [] | [] (d) Coding conventions | | | | | |

[]

(e)

Hardware sizing

ID: Q-17-13-01

| P-Question: | | From the following seven answers select four that fit best. 2 points | | | | | |
|--|-----------|---|--------------------|--|--|--|--|
| Which | FOUR of t | he following statements about (crosscutting) concepts are most арр | oropriate? | | | | |
| [] | (a) | Uniform usage of concepts reduces coupling between building bloom | ocks. | | | | |
| [] (b) The definition of appropriate concepts ensures the pattern compliance of the architecture. | | | | | | | |
| [X] | (c) | Uniform exception handling can be achieved when architects agree upon a suitable concept prior to implementation. | ee with developers | | | | |
| [] | (d) | For each quality goal there should be an explicitly documented co | ncept. | | | | |
| [X] | (e) | Concepts are a means to increase consistency. | | | | | |
| [X] | (f) | A concept can define constraints for the implementation of many | building blocks. | | | | |
| [X] | (g) | A concept might be implemented by a single building block. | | | | | |
| | | | | | | | |

Question 4

ID: Q-17-13-02

| K-Question: | Assign all answers. | 2 points | |
|-------------|---------------------|----------|--|
|-------------|---------------------|----------|--|

In your project, three architects and seven developers are working on the documentation of the software architecture. Which methods are appropriate in order to achieve a consistent and adequate documentation, and which are not?

| appropriate | not appropriate | | |
|-------------|--------------------|-----|--|
| [X] | [] | (a) | The lead architect coordinates the creation of the documentation. |
| [X] | [] | (b) | Identical templates are used for the documentation. |
| [] | [X] | (c) | All parts of the documentation are automatically extracted from the source code. |

Things like *reasoning* or *alternatives* won't be contained in code, but need to be included in documentation, therefore not **all** parts of documentation can be extracted from source code.

ID: Q-17-13-03

| P-Question: | From the following eight answers select four that fit best. | 1 point |
|-------------|--|---------|
|-------------|--|---------|

Which FOUR of the following techniques are best suited to illustrate the workflow or behavior of the system at runtime?

| [X] | (a) | Flowcharts |
|-----|-----|---|
| [X] | (b) | Activity Diagrams |
| [] | (c) | Depiction of screen flows (sequence of user interactions) |
| [X] | (d) | Sequence diagram |
| [] | (e) | Linear Venn diagram |
| [X] | (f) | Numbered list of sequential steps |
| [] | (g) | Tabular description of interfaces |
| [] | (h) | Class diagrams |

Question 6

ID: Q-17-13-04

| P-Question: | From the following five answers select three that fit best. | 1 point |
|-------------|--|---------|
|-------------|--|---------|

Which THREE of the following principles apply to testing?

- [X] (a) In general, it is not possible to discover all errors in the system.
- [X] (b) In components with many known previous errors, the chances for additional errors are high.
- [] (c) Sufficient testing can show that a program is free of errors.
- [X] (d) Testing shows the existence of errors rather than the absence of errors.
- [] (e) Functional programming does not allow automated testing.

|--------------------------|--|---------------|---|--|--|--|--|--|--|
| Decide for each | Decide for each of the following statements whether it is true or false. | | | | | | | | |
| true | false | | | | | | | | |
| [X] | [] | (a) | Each iteration of an agile development approach could have an impact on the fundamental architecture decisions. | | | | | | |
| [] | [X] | (b) | The total effort spent on architectural work is much higher in iterative projects compared to waterfall projects. | | | | | | |
| [] | [X] | (c) | Agile projects do not need architecture documents since the development team uses daily standup-meetings to communicate decisions. | | | | | | |
| [] | [X] | (d) | If your systems consist of a set of microservices there is no need for a central architecture document since each service is free to choose its technologies. | | | | | | |
| Question 14 | | | | | | | | | |
| ID: Q-20-04-10 | | | | | | | | | |
| K-Question: | Assign all a | inswers. | 2 points | | | | | | |
| Which of the foll false. | owing statemo | ents regardir | ng project goals and architectural goals is true and which is | | | | | | |
| true | false | | | | | | | | |
| [X] | [] | (a) | Project Goals can include functional requirements as well as quality requirements. | | | | | | |
| [X] | [] | (b) | Architectural goals are derived from the quality requirements for the system or product. | | | | | | |

Explanation:

[]

[]

[X]

[X]

Business stakeholder might very well have goals like performance, flexibility or security, which are considered "architecture goals".

(c)

(d)

Business stakeholders should concentrate on business

To avoid conflicts, business goals and architectural goals

goals and not interfere with architectural goals.

should be non-overlapping sets.

ID: Q-20-04-11

| P-Question: | | From the following five answers select two that fit best. | 1 point | | |
|---|-----|---|--------------------|--|--|
| What does the rule "explicit, not implicit" mean for architecture work? Choose the TWO best-fi answers. | | | | | |
| [] | (a) | Architects should avoid recursive structures and replace them by | y explicit loops. | | |
| [X] | (b) | Architects should make the assumptions leading to decisions ex | plicit. | | |
| [] | (c) | Architects should explicitly insist on natural language explanatio for each building block. | ns (i.e. comments) | | |
| [] | (d) | Architects should explicitly insist on written or at least verbal jus development effort estimates from their team. | tifications for | | |
| [X] | (e) | Architects should make prerequisites for their decisions explicit. | | | |
| | | | | | |

Question 16

ID: Q-20-04-19

P-Question: From the following five answers select **three** that fit best. 1 point

Identify the THREE most appropriate examples for typical categories of software systems.

[X] (a) Batch system
[X] (b) Interactive online system
[] (c) Linnés system.
[X] (d) Embedded real-time system.
[] (e) Integration test system.

| P-Question: | | From the following five answers select three that fit best. 1 point | | | | | |
|-----------------------------------|---------|---|------------------------|--|--|--|--|
| There are many a most often found | | approaches that lead to a software architecture. Which of the follow d in practice? | ving are the THREE | | | | |
| [] | (a) | User interface driven design | | | | | |
| [X] | (b) | Domain driven design | | | | | |
| [X] | (c) | View based architecture development | | | | | |
| [X] | (d) | Bottom-up design | | | | | |
| [] | (e) | Majority voting | | | | | |
| Ques | tion 18 | | | | | | |
| ID: Q-2 | 0-04-38 | | | | | | |
| P-Que | estion: | From the following six answers select three that fit best. | 1 point | | | | |
| | | ture development methods suggest a view-based approach. Which often used? | three of the following | | | | |
| [] | (a) | Physical database view | | | | | |
| [X] | (b) | Context view | | | | | |
| [X] | (c) | Building Block/Component view | | | | | |
| [] | (d) | Test-driven view | | | | | |
| [] | (e) | Configuration view | | | | | |
| [X] | (f) | Runtime view | | | | | |

ID: Q-20-04-22

| P-Question: When documenting | | From the following four answers select two that fit best. 1 point | | | | |
|---|--|---|-----------------------|--|--|--|
| | | ng a building block of your software architecture, which two information should the blac ontain? | | | | |
| [X] | (a) | Public interfaces. | | | | |
| [X] | (b) | Responsibility of the building block. | | | | |
| [] | (c) | Internal structure of the building block. | | | | |
| [] | (d) | Specification of the implementation details. | | | | |
| Ques | tion 20 | | | | | |
| ID: Q-2 | 0-04-17 | | | | | |
| P-Que | estion: | From the following five answers select two that fit best. | 1 point | | | |
| | prerequis riate ans | ites have to be fulfilled before developing a software architecture? wers. | Pick the TWO most | | | |
| [] | (a) | The requirements specification for the system is complete, deta | ailed and consistent. | | | |
| [X] | (b) The most important qualities for the system are known. | | | | | |
| [X] | [X] (c) Organizational constraints are known. | | | | | |
| [] | (d) | The programming language has been selected. | | | | |
| [] (e) Hardware for the development team is available. | | | | | | |

In most cases it is unrealistic to have *complete* requirements specification. Often it is enough to have an overview and know certain details (e.g. quality requirements).

ID: Q-20-04-18

| P-Question: Which factors ca answers. | | From the following four answers select three that fit best. 1 point an influence the design of a software architecture? Pick the THREE most appropriate | | | |

| K-Question: | Assign all answers. | 2 points |
|-------------|---------------------|----------|
| V | | 1 |

You can communicate aspects of your software architecture verbally and/or in writing. How do these variants correlate? Decide for each of the following statements whether it is true or false.

| true | false | | |
|------|-------|-----|---|
| [X] | [] | (a) | Verbal communication should supplement written documentation. |
| [] | [X] | (b) | Feedback to architecture decisions should always be done in writing to ensure traceability. |
| [] | [X] | (c) | Written documentation should always precede verbal communication. |
| [] | [X] | (d) | Architects should pick one variant (verbal or written) and stick to this choice during the whole development. |

- Sometimes verbal communication needs to come first, there is no general rule.
- Feedback should not be restricted to written statements.

Question 28

| K-Question: | Assign all answers. | 2 points |
|--------------------|--|--------------|
| Which of the follo | wing statements about notations for architectural views is true and whic | ch is false? |
| true | false | |

| [] | [X] | (a) | Business Process Model & Notation (BPMN) should only be used by Business Analysts and not for architecture documentation. |
|-----|-----|-----|--|
| [] | [X] | (b) | UML deployment models are the only way to document the mapping of software components to infrastructure. |
| [X] | [] | (c) | UML Package Diagrams can be used to capture the building-block view of software architectures. |
| [X] | [] | (d) | As long as the notation is explained (e.g. by a legend), any notation can be sufficient to describe building block structures and collaboration. |

ID: Q-20-04-13

| P-Question: | | From the following four answers select two that fit best. 1 point | | | | |
|--|---------|--|----------------------|--|--|--|
| Which architectural views have the most practical application for developing software architecture point | | | are architectures? 1 | | | |
| [] | (a) | Pattern View. | | | | |
| [] | (b) | Observer View. | | | | |
| [X] | (c) | Building-Block View (Component View). | | | | |
| [X] (d) | | Deployment View. | | | | |
| Ques | tion 30 | | | | | |
| ID: Q-2 | 0-04-23 | | | | | |
| P-Que | estion: | From the following five answers select two that fit best. | 1 point | | | |

The context view might contain a business context and a technical context, or both. Pick the two most appropriate answers that apply to the technical context.

[X] The technical context contains the physical channels between your system and its (a) environment. [] The technical context contains all the infrastructure on which the components of your (b) system are deployed. [] The technical context should include hardware pricing or pricing of cloud services (c) used as infrastructure for your architecture. [] (d) The technical context contains information about the chosen programming language as well as all frameworks used to implement your software architecture. [X] (e) The technical context might contain different elements than the business context.

ID: Q-20-04-24

| P-Que | estion: | From the following four answers select two that fit best. | 1 point |
|-------|---------|---|-----------------------|
| | | ecture documentation could contain descriptions of cross-cutting c by documentation of cross-cutting concerns is useful. | oncerns. Pick the TWO |
| [] | (a) | Cross-cutting concepts should focus on the domain and be free information. | of technical |
| [X] | (b) | Aspects or concepts that are used in multiple parts of your soft should be described in a non-redundant way. | ware architecture |
| [X] | (c) | Cross-cutting concepts can be reused in more products within t | he same organization. |
| [] | (d) | Cross-cutting concepts should be implemented by specialists. I documentation is useful. | herefore, separate |

Question 32

ID: Q-20-04-25

| K-Question: | Assign all answers. | 2 points |
|-------------|---------------------|----------|

What are guidelines for good interface design? Check which of the following statements are true and which are false.

| true | false | | |
|------|-------|-----|--|
| [X] | [] | (a) | Use of interfaces should be easy to learn. |
| [X] | [] | (b) | It should be possible to write client code for the interface, that is reasonably easy to understand. |
| [] | [X] | (c) | An interface should provide access to a comprehensive set of implementation details. |
| [X] | [] | (d) | Interface specifications should contain functional and non-functional aspects. |
| [] | [X] | (e) | Local and remote calls to an interface should behave identically in all aspects. |

Explanation

Regarding option (e), "identical behavior in all aspects": It's technically not feasible to have *identical* behavior, at least concerning latency, and response time.

A more detailed explanation can be found in the (rather famous) Fallacies_of_distributed_computing

ID: Q-20-04-26

| K-Question: | Assign all answers. | 1 point |
|-------------|---------------------|---------|

One definition says: "Software architecture is the sum of all the decisions you have taken during development." Check which of the following statements about architectural/design decisions are true and which are false.

| true | false | | |
|------|-------|-----|---|
| [X] | [] | (a) | Architectural decisions can impact the structure of the building block or components. |
| [] | [X] | (b) | Software architects shall justify all design decisions in writing. |
| [X] | [] | (c) | Architectural decisions can have interdependencies between each other. |
| [X] | [] | (d) | Tradeoffs between conflicting quality requirements should be explicit decisions. |

Not *all* decisions need to be justified in writing - as the requirement for *written* documentation depends on the situation, the team, the system and other factors.

Question 34

ID: Q-20-04-31

| K-Question: | Assign all answers. | 2 points |
|-------------|---------------------|----------|

Which of the following statements are typical reasons for introducing an architecture documentation and which are not typical reasons?

| typical | not typical | | |
|---------|-------------|-----|--|
| [X] | [] | (a) | To support onboarding of new developers. |
| [] | [X] | (b) | To support the automated testing approach of the system. |
| [X] | [] | (c) | To support the work of distributed teams. |
| [X] | [] | (d) | To assist in future enhancements of the product. |
| [X] | [] | (e) | To conform to regulatory or legal constraints. |
| [] | [X] | (f) | To ensure that developers have enough work to do. |

Explanation

Read carefully: The question is about the typical reasons for an **introduction** of an architecture documentation.

| • | estion: | Assign all ans | swers. | | 1 point |
|----------------------------|---|---|--|---|---------------------|
| Which (| of the foll | lowing pairs of q | ualities are | e usually in conflict to each other, and wh | ich are not? |
| confli | ct | no conflict | | | |
| [] | | [X] | (a) | Understandability – Readability. | |
| [X] | | [] | (b) | Usability - Security. | |
| [X] | | [] | (c) | Runtime configurability – Robustness | |
| [] | | [X] | (d) | Security - Functional correctness. | |

ID: Q-20-04-28

| P-Question: | From the following six answers select four that fit best. | 2 points |
|-------------|--|----------|
|-------------|--|----------|

Which four of the following are best suited to support the analysis of the achievement of the quality requirements (*qualitative analysis*) of your software architecture? Pick the four best alternatives.

- [X] (a) Quantitative dependency analysis.
- [X] (b) Architecture models.
- [X] (c) Quality scenarios.
- [] (d) Team size.
- [X] (e) Log files.
- [] (f) Organizational structure.

Question 38

ID: Q-20-04-29

| P-Question: | From the following five answers select two that fit best. | 2 points |
|-------------|--|----------|
| | 3 | 1 |

You try to analyze your architecture quantitatively. Which are the two most appropriate indicators for architectural problem areas?

- [X] (a) High coupling of components.
- [] (b) Names of public methods do not reflect their purpose.
- [] (c) Missing comments.
- [X] (d) Clusters of errors in certain building blocks of the system.
- [] (e) Number of test cases per component.

ID: Q-20-04-36

| From the following five answers select three that fit best. | 1 point |
|--|--|
| | From the following five answers select three that fit best. |

You try to quantitatively analyze your architecture. Which three of the following properties can you measure reliably in your software architecture? Pick the three best fitting answers.

- [X] (a) Size of building blocks (e.g. LOC).
- [X] (b) Change rate of the source code of components.
- [] (c) Cohesion of the architectural components.
- [] (d) Security level of a component.
- [X] (e) Number of the developers that contributed to a specific component.

Explanation

- Size can easily and reliably be measured when statically analyzing source code (lines-of-code metric is a reliable size metric)
- change-rate and number-of-developers-per-component can reliably be measured when taking the
 version control history into account, which is perfectly feasibly with systems like git, subversion or
 similar tools that are widely used in development.
